Political Parties Form One Element of Our Social Life

LOYALTY PRIME VIRTUE

LoYalty and the Independents

By W. T. SHERROD

The test which individuals apply to the vote is every day the subject of discussion in our country. It is largely because of the assumption that the will of the majority is the ultimate rule of opinion and conduct that a great deal of evil has been done in the past. The thought that there is any real value in personal responsibility and integrity has been long forgotten.

The vote is supposed to represent a certain set of principles. It is assumed that the vote is the expression of the individual's own judgment, or of his own ideas, and not of the ideas of others.

In the last election, the Democratic Party was the only one which can claim to have a platform. The Republican Party did not even have a platform, as it is not a party in the true sense of the word. It is merely a combination of individuals who happen to be of the same political opinion, but who have no common interest or common object, and who are therefore not acted upon by any common motives.

The Independent Party is a party of individuals who are independent of all parties, and who have no common interest or common object, and who are therefore not acted upon by any common motives.

The vote is supposed to represent a certain set of principles. It is assumed that the vote is the expression of the individual's own judgment, or of his own ideas, and not of the ideas of others.
RURAL BANKER SHOULD FINANCE AGRICULTURE—Accepting Farm Paper

There was a time when the banks of financing the farmer needed to hold all cash on hand in order to maintain the necessary reserve. This practice has been largely abandoned, but in recent years there has been a return to the old practice of accepting farm paper. Many farmers have invested their crop and livestock in this way, and the banks have been able to make a profit by accepting this paper for funds. In this way the farmer is able to finance his operations more readily, and the bank is able to make a profit by accepting this paper. The banks have the privilege of lending to the farmer in the future.

The Banker at Home

The local banks dealing with the industries of the community have a great deal to do with the prosperity of the community. When credit is transferred from the rural banks to the industrial banks, the latter can profit by the rural community's prosperity.

Barley

No. 1 Red Winter: $1.92
No. 2 Red Spring: $1.92
No. 3 N. Spring: $1.92

Rye

No. 1 Red Winter: $1.82
No. 2 Red Spring: $1.77
No. 3 Rye: $1.61

Beans

$3.75

New Potatoes

70c to 75c

Beans

$3.75

Timothy Hay

$18.00 to 23.90

The statistics regarding the increase of production show that the advances in agricultural production are due to the increased use of modern machinery. The use of modern machinery has increased the efficiency of agriculture, and the result has been an increase in production. This increase in production has made it possible for the farmer to sell his products at a higher price.

The farmer must be able to sell his products at a higher price in order to make a profit. This is the case with all industries, and it is particularly true in agriculture. The farmer must be able to sell his products at a higher price in order to make a profit. This is the case with all industries, and it is particularly true in agriculture.
