**The Dairy Department**

Excessive engorgement of feeding or milking cows are blamed for losses in the dairy department. A step to solve the problem is to have a dietician on call. In this department, milk production is being increased by controlled feeding and milk taken care of in a proper manner. Adequate care is being given to the calf so that it will produce better quality milk. Adequate care is also being given to the cow so that it will produce better quality milk.

**Tobacco New Cash Crop For Southern Minnesota**

The production of tobacco as a new cash crop in southern Minnesota is expected to be very profitable. Tobacco is a very profitable crop, and it is estimated that it will bring a profit of $50 per acre. The tobacco crop is expected to be very good this year, and it is hoped that it will bring a good profit to the farmers.

**MINNESOTA RAISERS OF SHEEP ARE FORTunate**

Says W. A. McPherson

Minnesota sheep growers are fortunate that Minnesota has been petitioned for the establishment of a state Agricultural Extension System. This system will provide necessary educational services to sheep growers in the state. The system will consist of a state agricultural extension service, a state agricultural experiment station, and a state agricultural college. The state agricultural extension service will provide educational services to sheep growers, while the state agricultural experiment station will conduct research to improve the effectiveness of the services provided by the state agricultural extension service.

**MINNESOTA SHEEP HOPPERS WOULD BE IN A PIN**

Expense Feeds Required

Expensive feeds required by sheep for the best results are:

1. Blood meal
2. Soybean meal
3. Corn gluten feed
4. Fish meal
5. Cottonseed meal
6. Brewers' grain
7. Molasses
8. Yeast
9. Yeast-based products
10. Other supplemented feed products.

**MRS. EGG SHIPPER**

For the best interest of the consumer, a system of egg grading and inspection is necessary. The system is to be an integral part of the United States Department of Agriculture's efforts to ensure the safety and quality of eggs. The system will be implemented by the Federal Egg Grading and Inspection Service. The service will be responsible for ensuring that eggs are graded and inspected according to established standards. The system will be funded through a fee system that is to be established by the Department of Agriculture.

**GIVE YOUR CHILDREN A CHANCE**

Of course you want your children to have a better chance than you had — every good father does. You want your daughters to marry well and you want your sons to have enough capital and sufficient education to begin their farming careers almost at the point you have reached after all your years of work. Many a farmer has found in pure-bred blood the solution for two outstanding problems — how to keep the children contented with farm life and how to start them out so that they are bound to succeed.

**LIVESTOCK AND AGRICULTURE**

In addition to providing educational services to sheep growers, the state agricultural extension service will also provide educational services to other livestock growers. The state agricultural extension service will provide educational services to other livestock growers, such as beef cattle and swine growers, in the state. The educational services will be provided through a network of agricultural extension agents, who will be based in the counties of the state. The agricultural extension agents will provide educational services to livestock growers, such as beef cattle and swine growers, in the state. The educational services will be provided through a network of agricultural extension agents, who will be based in the counties of the state.
