PAGE SEVEN

DEPARTMENT EDITED BY THE STUDENTS OF THE WINONA STATE NORMAL SCHOOL

History Courses Have Had
New Features Introduced

Recent Survey of History Work in Other Normal Schools

Miss Rice, in her history courses, has introduced a number of new features, which are expected to be of much interest to the Winona school.

JUNIORS ATTENTION!

The success of the Pow-Wow depends upon the Junior class. It is in the Junior class that the future Normal school is trained. The success of the school is dependent upon the Junior class. It is in the Junior class that the future Normal school is trained. The success of the school is dependent upon the Junior class.

CANDY COUNTRY IS A GREAT SUCCESS

Candy, beautiful and luscious, has been the keynote of the Junior class in their annual sale. The sale was conducted with great success.

CANDY TAX DIET WILL ATTRACT NORMALITES ON SATURDAY EVENING

The candy, which was to be sold at the annual sale, was donated by the Junior class. The sale was conducted with great success.

Three Winona Normal Teachers Will Attend History Conference

Miss Alice, Miss Dorothy, and Miss Alice Brown were selected to attend the history conference. They were given permission to attend.

NEW APPOINTMENTS MADE

The following appointments were made:

Miss Alice, Miss Dorothy, and Miss Alice Brown were appointed to attend the history conference. They were given permission to attend.

Livestock Notes

It has often been a joyous sight to see herds of dairy cattle in the pasture, with the soft sounds of their grazing filling the air. This is the time of year when dairy farmers are particularly busy with their operations. The weather is generally mild, and the pastures are lush and green. The dairy cows are in prime condition, and the milk production is at its peak. The farmers are careful to provide adequate feed, clean water, and shelter to their animals. They also monitor the health of their cows, ensuring that they are free from any diseases or infections. The farmers are very conscious of the importance of maintaining the health and well-being of their dairy cows, as it directly affects the quality of the milk they produce.

Livestock and Agriculture

EASIER TO PREVENT: DISEASES THAN TO CURE THEM

Most self-sufficiency is due to improved feeding, improved management, or both. Keep the calf off the cold animal in winter and out of the sun in summer. Keep them clean and dry, and provide a dry, well-bedded stall at all times.

Provide cattle's better feeds in summer and fall, except in the South, and the diseases will be reduced. The management practices that were previously adopted will be sufficient to control the diseases, and the cost of veterinary services will be reduced.

Keep the cattle off the cold animal in winter and out of the sun in summer. Keep them clean and dry, and provide a dry, well-bedded stall at all times.

Livestock and Agriculture

SERUM REDUCES HOG BLADDER

Loss of by leg hogs has been materially reduced in Suffolk, Ky., since 1920. This is due to the fact that the serum is being used in the treatment of hog bladders. The serum has been found to be effective in reducing the incidence of hog bladders. It is administered to the hogs by injection, and the treatment is repeated every few days. The serum is prepared from the sera of hogs that have been successfully treated for hog bladders.

Livestock and Agriculture

MINNESOTA DAIRY COWS MAKE REBELLION

Many Minnesota dairy cows made a revolt in January, m. M. P. M. of University Farm, St. Paul. The Minnesota agriculture department's representative was asked to find out the cause of the revolt, and the cause was found to be a lack of milk in the barn. The cows were kept hungry, and the result was a revolt. The cows were fed on a mixture of hay and silage, and the result was that the cows refused to eat. The cows were fed on a mixture of hay and silage, and the result was that the cows refused to eat.

Livestock and Agriculture

SNOW OF THE HAMBLETONIAN SIRE

A large percentage of snow is due to meat and milk production, the prices of which are high. The prices of the snow are also high, and the farmers are anxious to get rid of the snow as soon as possible. This is done by selling the snow to the snow dealers, who then sell it to the snow plows, who then spread it on the streets. The snow dealers are also anxious to get rid of the snow, and they are willing to pay a high price for it.

Livestock and Agriculture

BRANDS AND GRADES OF OIL WHICH HAVE OIL ENTIRELY UNSUITED ARE USED, NOT BARELY

In the latter method, the oil is used in the oil entirely unsuited to the purpose, and the result is that the oil is not fully used. This is due to the fact that the oil is not fully used, and the result is that the oil is not fully used. The oil is not fully used, and the result is that the oil is not fully used.

Livestock and Agriculture

MINNESOTA DAIRY COWS MAKE REBELLION

The majority of the dairy cows in Minnesota are used for milk production, and the prices of the milk are high. The prices of the milk are high, and the farmers are anxious to get rid of the milk as soon as possible. This is done by selling the milk to the milk dealers, who then sell it to the milk producers, who then sell it to the consumer. The milk dealers are also anxious to get rid of the milk, and they are willing to pay a high price for it.

Livestock and Agriculture

LIVESTOCK AND AGRICULTURE

PARCHES ON CATTLE EYES

A large percentage of cattle eyes is due to infection with the bacteria that cause the infection. The bacteria are carried in the eyes, and the infection is spread from one eye to another by the flies that carry the bacteria. The flies are attracted to the eyes by the smell of the infected eyes, and they land on the eyes and spread the bacteria. The flies are also attracted to the eyes by the heat of the infected eyes, and they land on the eyes and spread the bacteria. The flies are also attracted to the eyes by the heat of the infected eyes, and they land on the eyes and spread the bacteria.
